Coordination, Conflict & Competition:

A text in intermediate Microeconomics

Samuel Bowles & Duncan Foley
COORDINATION, CONFLICT, AND
COMPETITION: A TEXT IN
INTERMEDIATE MICROECONOMICS

by Samuel Bowles and Duncan K. Foley

12/10/12
Samuel Bowles (PhD, Economics, Harvard University) heads the Behavioral Sciences Program at the Santa Fe Institute. He has taught microeconomic theory to undergraduates and PhD candidates at Harvard, the University of Massachusetts, and the University of Siena. He is the author of Notes and Problems in Microeconomic Theory (1980), Understanding Capitalism: Competition, Command and Change (2004) and Microeconomics: Behavior, Institutions and Evolution (2005).

Duncan K. Foley (PhD, Economics, Yale University) is the Leo Model Professor of Economics at the New School for Social Research and an External Professor of the Santa Fe Institute. He has taught microeconomic theory to undergraduates and graduate students at MIT, Stanford, Barnard College of Columbia University, and the New School for Social Research. He is author of Understanding Capital: Marx’s Economic Theory (1986), Growth and Distribution (with Thomas R. Middl) (1999), Unholy Trinity: Labor, Capital and Land in the New Economy (2003), and Adam’s Fallacy: A Guide to Economic Theology (2006).
Contents

1 Prologue: Economics and the Wealth of Nations 7
  1.1 Works cited .............................................. 17

2 Coordination Problems and Institutional Design 20
  2.1 Getting the Rules Right .................................. 21
  2.2 Pareto-comparisons and Pareto-efficiency ................. 21
  2.3 The constitutional conundrum ................................ 23
  2.4 Coordination and conflict: An example ...................... 25
  2.5 Games .................................................................... 30
  2.6 Best Responses and Cournot-Nash Equilibrium ............. 31
  2.7 The structure of social interactions ......................... 33
  2.8 Coordination failures ............................................. 37
  2.9 Games, institutions, and organizations .................... 45
  2.10 Conclusion .......................................................... 49
  2.11 Discussion questions ........................................... 50
  2.12 Problems ........................................................... 51
  2.13 Works cited ....................................................... 52

3 Homo economicus 54
  3.1 Preferences, reasons, and behaviors .......................... 55
  3.2 Willingness-to-pay ................................................. 58
  3.3 Money equivalents and consumer surplus .................... 59
  3.4 Utility ..................................................................... 60
  3.5 Demand .................................................................... 62
  3.6 Indifference curves .................................................. 67
  3.7 Bargaining over a surplus: allocation and distribution ........ 71
  3.8 Social welfare functions and social choice .................. 78
  3.9 Conclusion: Is Homo economicus the right assumption? ..... 79
  3.10 Discussion questions ............................................. 80
  3.11 Problems ............................................................. 80
  3.12 Further reading .................................................... 81
## Contents

4 Time and Uncertainty 82
  4.1 Homo economicus chooses a major 83
  4.2 Felicity discounting .......................... 85
  4.3 Homo economicus chooses an occupation .. 89
  4.4 Buying and selling risk .......................... 96
  4.5 Do real people maximize expected utility? .. 99
  4.6 Risk-dominance .................................. 99
  4.7 Bayesian updating ................................ 101
  4.8 Situation dependence .......................... 102
  4.9 Conclusion .................................. 105
  4.10 Problems .................................. 106
  4.11 Works cited .................................. 106

5 Social Preferences 108
  5.1 Social preferences ................................ 113
  5.2 The Ultimatum Game; Reciprocity and Retribution .. 115
  5.3 The Public Goods Game .......................... 119
  5.4 Further experimental results ...................... 121
  5.5 The lab and the street: Can one generalize from experimental evidence? 127
  5.6 An empirically-based social preference function .. 129
  5.7 Conclusion .................................. 132
  5.8 Discussion Questions .......................... 134
  5.9 Problems .................................. 135
  5.10 Works cited .................................. 135

6 Production and Costs 139
  6.1 Production and the capitalist firm .................. 139
  6.2 Inputs and outputs ................................ 140
  6.3 Technology and techniques of production ........ 140
  6.4 Returns to scale ................................ 142
  6.5 The competitive cost-minimizing firm .............. 144
  6.6 Comparative statics in the competitive cost-minimizing model ... 149
  6.7 Total, average, and marginal cost curves ........ 149
  6.8 Profit maximization under competition ............ 156
  6.9 The supply curve of the competitive industry ..... 163
  6.10 Industry adjustment to a change in demand ..... 166
  6.11 Upward sloping industry supply and rent .......... 171
  6.12 Congestion, rent, and user-taxes ................. 173
  6.13 Bargaining and prices .......................... 174
  6.14 The monopoly market ................................ 176
  6.15 Monopoly pricing ................................ 186
  6.16 Discussion Questions .......................... 188
  6.17 Problems .................................. 188
CONTENTS

7 Coordination Failures and Institutional Responses 190
  7.1 The common property resource problem 191
  7.2 The Tragedy of the Fishers Revisited 192
  7.3 Best responses and Nash Equilibria 193
  7.4 Pareto inferior outcomes at Nash Equilibrium 196
  7.5 Pareto-efficient effort levels 199
  7.6 Averting the Fishers' Tragedy 201
  7.7 Privatization 204
  7.8 Third party regulation 206
  7.9 Local interactions 208
  7.10 Team Production 210
  7.11 Social preferences and the "social multiplier" 214
  7.12 A taxonomy of coordination problems 217
  7.13 Conclusion 219
  7.14 Problems 222
  7.15 Works cited 223

8 Utopian Capitalism 225
  8.1 The Fundamental Welfare Theorem(s) 227
  8.2 Bilateral Exchange 229
  8.3 The Walrasian theory of competitive equilibrium 232
  8.4 Walrasian competitive equilibrium with an auctioneer 235
  8.5 Competitive markets and distribution 238
  8.6 Competitive markets without an auctioneer 240
  8.7 Trading at disequilibrium prices 242
  8.8 What's wrong with the Fundamental Welfare Theorems? 243
  8.9 Conclusion 249
  8.10 Problems 250
  8.11 Works cited 252

9 Non-Market Efficiency and Distribution 254
  9.1 The Coase Theorem 256
  9.2 Coase with more general utility functions 260
  9.3 Bargaining failures without impediments 262
  9.4 Two-and-a-half cheers for the Coase Theorem 265
  9.5 Discussion Questions 267
  9.6 Problems 267
  9.7 Works cited 268

10 Bargaining and Rent-seeking 270
  10.1 The Bargaining Problem 272
  10.2 The Nash Bargaining Model 275
  10.3 Organizational rent-seeking 280
  10.4 The inefficiency of bargaining in a war of attrition 282
  10.5 Conflicts of interest and bargaining breakdowns 283
  10.6 Discussion questions 284
11 Exchange: Contracts, norms and power

<table>
